All of the alternatives listed above, as well as other alternatives suggested during scoping, will be considered during the development of the draft EIS. Prior to the completion of the draft EIS, it is expected that a screening process will consider each alternative’s potential benefits, costs, and impacts. The EIS will also consider any additional reasonable alternatives identified during scoping that provide similar transportation benefits while reducing or avoiding adverse impacts.

IV. Public Involvement

A comprehensive public involvement program has been developed. The program includes: Outreach to local and county officials and community and civic groups; a public scoping process to define the issues of concern among all parties interested in the project; a public hearing on release of the draft EIS; and development and distribution of project newsletters.

V. Probable Effects and Potential Impacts for Analysis

The FTA and the MBTA will evaluate all environmental, social, and economic impacts of the alternatives analyzed in the EIS. The impact areas to be addressed include: noise and vibration; land use; visual/aesthetic values; ecosystems; cultural and historical resources; water quality, floodplains, and drainage; air quality; traffic and parking; hazardous materials; utilities; energy use and conservation; public safety and security; and community and economic impacts. The EIS will evaluate potential environmental justice issues as well as secondary, cumulative, and construction-related impacts. The need for right-of-way acquisitions and relocations will also be evaluated. Alternative alignments, designs, station locations, and other measures to avoid, minimize, and mitigate adverse impacts will be developed and evaluated.

VI. FTA Procedures

In accordance with FTA policy, all Federal laws, regulations, and executive orders affecting project development, including but not limited to the regulations of the Council on Environmental Quality and FTA implementing NEPA (40 CFR parts 1500-1508, and 23 CFR part 771), the 1990 Clean Air Act Amendments, section 404 of the Clean Water Act, Executive Order 12898 regarding environmental justice, the National Historic Preservation Act, the Endangered Species Act, and section 4(f) of the Highway Act, will be addressed to the maximum extent practicable during the NEPA process. In addition, the MBTA seeks §5309 New Starts funding for the project and will therefore be subject to the FTA New Starts regulation (49 CFR part 611) which was published in the Federal Register on December 7, 2000 (65 FR 76864) and became effective on April 6, 2001. This New Starts regulation requires the submission of certain specified information to FTA to support an MBTA request to initiate preliminary engineering, which is normally done in conjunction with the NEPA process.

Issued on: March 4, 2002.

Richard H. Doyle,
FTA Regional Administrator.

BILLING CODE 4910–57–P

DEPARTMENT OF TRANSPORTATION

Federal Transit Administration

Environmental Impact Statement:
South Corridor Phase 2 in Sacramento, CA

AGENCY: Federal Transit Administration, DOT.

ACTION: Notice of Intent to prepare a Supplemental Environmental Impact Statement (SEIS).

SUMMARY: The Federal Transit Administration (FTA) and the Sacramento Regional Transit District (RT) intend to prepare a Supplemental Environmental Impact Statement (SEIS) in accordance with the National Environmental Policy Act (NEPA) and a Subsequent Environmental Impact Report (SEIR) in accordance with the California Environmental Quality Act (CEQA) for a proposed light rail extension in the South Sacramento Corridor from Meadowview Road to Calvine Road at Auberry Road (Calvine/Auberry).

The proposed light rail transit mode and alignment were selected in 1995 by the RT Board of Directors as the Locally Preferred Alternative (LPA) following completion in 1994 of an Alternatives Analysis/Draft EIS/Draft EIR (AA/DEIS/ DEIR) for the South Sacramento Corridor. Seven transit alternatives (including bus, high-occupancy vehicle, and rail modes) with various alignment and station locations were evaluated in the AA/DEIS/DEIR). The LPA was included in the Sacramento Area Council of Government’s Metropolitan Transportation Plan.

The LPA (called the Low/UPRR Alignment in the AA/DEIS/DEIR) is an 11.5-mile extension to the existing light rail system beginning in downtown Sacramento and extending to Calvine/Auberry. In agreement with FTA, RT planned to build the LPA in phases. Phase 1 is currently under construction and extends light rail from downtown Sacramento for 6.5 miles to Meadowview Road, with seven stations at Broadway, 4th Avenue/Wayne Hultgren, City College, Fruitridge, 47th Avenue, Florin, and Meadowview. Revenue service for Phase 1 is anticipated to begin in September 2003.

The proposed Phase 2 would extend light rail approximately five miles from Meadowview Road to Calvine/Auberry. To date, five stations have been identified at Franklin Boulevard, Center Parkway (optional), Cosumnes River College/College Square, Power Inn Road (optional), and Calvine/Auberry. The proposed Phase 2 light rail extension would follow the Union Pacific Railroad (UPRR) right-of-way south from Meadowview Road, turn east along the proposed extension of Cosumnes River Boulevard, follow the Boulevard to Bruceville Road, turn south along Bruceville Road to serve Cosumnes River College/College Square development, turn east to cross State Route 99, and terminate at a station at Calvine/Auberry.

The SEIS/SEIR will evaluate a No-Action Alternative, a future “New Starts” Baseline Alternative, the Phase 2 Light Rail Extension Alternative, and additional alternatives that emerge from the scoping process. Scoping will be accomplished through correspondence and discussions with interested persons; community organizations; federal, state and local agencies; and through public meetings.

DATES: Comment Due Date: Written comments on the scope of alternatives and impacts to be considered in the SEIS/SEIR must be received no later than May 15, 2002, and must be sent to RT at the address indicated below.

Scoping Meetings

Public scoping meetings will be held on: (1) March 25, 2002 from 5:30 p.m. to 8:00 p.m. at Cosumnes River College Recital Hall, 8401 Center Parkway, Sacramento, CA 95823 and (2) April 11, 2002 from 5:30 p.m. to 8:00 p.m. at the Pannell Center located at 2450 Meadowview Road, Sacramento, CA 95832. The formal scoping meetings will be preceded by an open house (5:30 to 6:30 pm), allowing for the public to discuss the SEIS/SEIR work scope, process, proposed project, and alternatives with RT staff and consultants. A brief presentation will be given at 6:30 p.m., beginning the formal scoping meeting. Graphic presentations and scoping materials will be provided to assist the public in understanding the
The project purpose is to improve public transit service in the severely congested South Corridor by providing increased transit capacity and faster, convenient access throughout the Sacramento metropolitan region. As stated in the 1994 AA/DEIS/DEIR, the project’s goals are to: (1) Provide a transportation system that is safe, efficient, and coordinated, and that provides a balanced set of travel alternatives in the corridor, (2) ensure compatibility between land use policies and transportation policies so that the need for and amount of travel using automobiles is minimized, (3) provide a transportation system that makes the most efficient use of limited resources, (4) provide a transportation system that enhances and preserves the physical and natural environment, (5) provide a transportation system that is consistent with the needs and desires of the residents of the corridor, and that thereby maximizes community acceptance and political support. There is a need to alleviate severe and ever-increasing traffic congestion on State Route 99 (SR 99), which currently has recurring traffic congestion (Level of Service F) for one to two hours during both the morning and afternoon commute periods between Calvine and Florin roads. Daily traffic volumes north of Mack Road along SR 99 are expected to increase by 20 to 25 percent over the next 20 years. Between Calvine and Mack Roads, a 40 to 50 percent increase is expected. During the 1990s, SR 99 was widened to accommodate High Occupancy Vehicle (HOV) lanes from Elk Grove Boulevard north to the Sacramento Central City. However, no additional improvements are planned for this section over the next 20 years. The projected increase in traffic volumes will cause congestion on SR 99 to expand to more hours of the day and extend southward to Elk Grove, and this congestion is expected to cause traffic diversions to numerous parallel arterial roadways in the corridor, thereby adding to anticipated congestion levels along these roadways.

II. Purpose and Need

The project purpose is to improve public transit service in the severely congested South Corridor by providing increased transit capacity and faster, convenient access throughout the Sacramento metropolitan region. As stated in the 1994 AA/DEIS/DEIR, the project’s goals are to: (1) Provide a transportation system that is safe, efficient, and coordinated, and that provides a balanced set of travel alternatives in the corridor, (2) ensure compatibility between land use policies and transportation policies so that the need for and amount of travel using automobiles is minimized, (3) provide a transportation system that makes the most efficient use of limited resources, (4) provide a transportation system that enhances and preserves the physical and natural environment, (5) provide a transportation system that is consistent with the needs and desires of the residents of the corridor, and that thereby maximizes community acceptance and political support. There is a need to alleviate severe and ever-increasing traffic congestion on State Route 99 (SR 99), which currently has recurring traffic congestion (Level of Service F) for one to two hours during both the morning and afternoon commute periods between Calvine and Florin roads. Daily traffic volumes north of Mack Road along SR 99 are expected to increase by 20 to 25 percent over the next 20 years. Between Calvine and Mack Roads, a 40 to 50 percent increase is expected. During the 1990s, SR 99 was widened to accommodate High Occupancy Vehicle (HOV) lanes from Elk Grove Boulevard north to the Sacramento Central City. However, no additional improvements are planned for this section over the next 20 years. The projected increase in traffic volumes will cause congestion on SR 99 to expand to more hours of the day and extend southward to Elk Grove, and this congestion is expected to cause traffic diversions to numerous parallel arterial roadways in the corridor, thereby adding to anticipated congestion levels along these roadways.

III. Alternatives

The SEIS/SEIR will evaluate a No-Action Alternative, a future “New Starts” Baseline Alternative (sometimes called the Transportation Systems Management Alternative), and the Phase 2 Light Rail Extension. The alternatives will be developed further during the preparation of the Draft SEIS/SEIR. A brief description of the alternatives is provided below.

No-Action Alternative

This alternative consists of highway and transit systems existing as of year 2000, plus programmed improvements to the year 2025. It includes future conditions against which the transportation, environmental, and community impacts of the other alternatives are compared under NEPA.

Future “New Starts” Baseline Alternative

The Baseline Alternative is best described as transit improvements lower in capital cost than the proposed “Build” (light rail) Alternative. This alternative is generally the “best that can be done” without building the rail project. By definition, this alternative must result in a better ratio of transit mobility measures compared to cost than the No-Action Alternative.

The purpose of the Baseline Alternative is to isolate costs and benefits of the proposed major transit investment. At a minimum, the Baseline Alternative must include in the project corridor all reasonable cost-effective transit improvements short of investment in the light rail project. The New Starts Program is a federal program that provides funds for qualifying bus, rail and other transit-related projects.

Light Rail Alternative

This alternative consists of the construction of a five-mile extension of the light rail system from Meadowview Road to Calvine/Auberry and a supporting feeder bus system. To date, five stations have been identified at Franklin Boulevard, Center Parkway (optional), Cosumnes River College/College Square, Power Inn Road (optional), and Calvine/Auberry. The proposed extension would follow the UPRR right-of-way south from Meadowview Road, turn east along the proposed extension of Cosumnes River Boulevard, follow the Boulevard to Bruceville Road, turn south to serve Cosumnes River College/College Square development, turn east to cross State Route 99, and terminate at a station at Calvine/Auberry. Due to funding constraints, the light rail extension may need to be constructed in phases to one of two possible temporary terminal stations: Franklin Boulevard or Cosumnes River College/College Square. It is assumed that these temporary
terminal stations would be served by bus, express bus, and/or bus rapid transit routes and be supported by park- and-ride facilities.

IV. Probable Effects

The purpose of the SEIS/SEIR is to fully disclose, in advance of any decisions to commit substantial financial or other resources, the environmental consequences of building and operating a major capital investment in the Sacramento South Corridor. The SEIS/SEIR will explore the extent to which study alternatives and design options result in environmental impacts and will discuss actions to reduce or eliminate such impacts. Environmental issues to be examined in the SEIS/SEIR include: changes to the physical environment (biological and cultural resources, air quality, noise/vibration, water quality, floodplains, geology, visual/aesthetics); changes in the social environment (land use, development, business and neighborhood disruptions); changes in traffic and pedestrian circulation; changes in transit service and patronage; associated changes in traffic congestion; and impacts on parklands and historic sites. Impacts will be identified both for the construction period and for the long-term operation of the alternatives. The proposed evaluation criteria include: transportation, social, economic, and financial measures, as required by current federal (NEPA) and state (CEQA) environmental laws and the implementing regulations of the Council on Environmental Quality, FTA, and the State Office of Planning and Research. The relationships of the alternatives to other major corridor projects will be evaluated in the SEIS/SEIR. Examples include:

- Cosumnes River Boulevard extension,
- Roadway widenings—Cosumnes River Boulevard and Bruceville Road,
- Floodplain/drainage/levee/floodwall improvements,
- Existing and proposed utilities in the corridor—major sewer interceptors, possible Freeport Diversion water pipeline,
- Land use developments—College Square, City redevelopment areas, Cosumnes River College plans and improvements,
- UPRR capacity improvements, and
- Master Plan for the County Sanitation District Bufferlands.

To ensure that the full range of issues related to this proposed action will be addressed and all significant issues identified, comments and suggestions are invited from all interested parties. Comments or questions concerning this proposed action and the SEIS/SEIR should be directed to the RT Program Manager as noted in the ADDRESSES section above.

V. FTA Procedures

To streamline the NEPA process and to avoid duplication of effort, the agencies involved in the scoping process will consider the results of any previous planning studies or financial feasibility studies (e.g., Multi-Corridor Study [KT, 2001] and Sacramento Systems Planning Study [KT, 1991]) prepared in support of a decision by the Sacramento Area Council of Governments to include a particular alternative in the Regional Transportation Plan for Metropolitan Sacramento. Prior transportation planning studies may be pertinent to establishing the purpose of and need for the proposed action and the range of alternatives to be evaluated in detail in the SEIS/SEIR. The Draft SEIS/SEIR will be prepared simultaneously with conceptual engineering for the alternatives, including station and alignment options. The Draft SEIS/SEIR process will address the potential use of federal funds for the proposed action, as well as assess the social, economic, and environmental impacts of the alternatives. Station designs and alignment alternatives will be refined to minimize and mitigate any adverse impacts. After publication, the Draft SEIS/SEIR will be available for public and agency review and comments, and (a) public hearing(s) will be held. Based on the Draft SEIS/SEIR and comments received, RT will further refine the preferred alternative identified in the Final SEIS/SEIR and will apply for FTA approval to initiate Preliminary Engineering of the preferred alternative.

Issued March 4, 2002.

F. James Kenna,
Deputy Region IX Administrator.

DEPARTMENT OF TRANSPORTATION

Maritime Administration

[Docket Number: MARAD–2002–11737]

Requested Administrative Waiver of the Coastwise Trade Laws

AGENCY: Maritime Administration, Department of Transportation.

ACTION: Invitation for public comments on a requested administrative waiver of the Coastwise Trade Laws for the vessel ANOTHER REALITY.

SUMMARY: As authorized by Pub. L. 105–383, the Secretary of Transportation, as represented by the Maritime Administration (MARAD), is authorized to grant waivers of the U.S.-build requirement of the coastwise laws under certain circumstances. A request for such a waiver has been received by MARAD. The vessel, and a description of the proposed service, is listed below. Interested parties may comment on the effect this action may have on U.S. vessel builders or businesses in the U.S. that use U.S.-flag vessels. If MARAD determines that in accordance with Pub. L. 105–383 and MARAD’s regulations at 46 CFR part 388 (65 FR 6005; February 11, 2000) that the issuance of the waiver will have an unduly adverse effect on a U.S.-vessel builder or a business that uses U.S.-flag vessels, a waiver will not be granted.

DATES: Submit comments on or before April 8, 2002.

ADDRESSES: Comments should refer to docket number MARAD–2002–11737. Written comments may be submitted by hand or by mail to the Docket Clerk, U.S. DOT Dockets, Room PL–401, Department of Transportation, 400 7th St., SW., Washington, DC 20590–0001. You may also send comments electronically via the Internet at http://dms.dot.gov/submit/. All comments will become part of this docket and will be available for inspection and copying at the above address between 10 a.m. and 5 p.m., E.T., Monday through Friday, except federal holidays. An electronic version of this document and all documents entered into this docket is available on the World Wide Web at http://dms.dot.gov.

SUPPLEMENTARY INFORMATION: Title V of Pub. L. 105–383 provides authority to the Secretary of Transportation to administratively waive the U.S.-build requirements of the Jones Act, and other statutes, for small commercial passenger vessels (no more than 12 passengers). This authority has been delegated to the Maritime Administration per 49 CFR 1.66, Delegations to the Maritime Administrator, as amended. By this notice, MARAD is publishing information on a vessel for which a request for a U.S.-build waiver has been received, and for which MARAD requests comments from interested parties. Comments should be submitted to the docket number of this notice and the vessel name in order for MARAD to
